

Republic Metals provides a recycling service to all customers whose anodes can be re-melted, analyzed, alloyed and upgraded as necessary and used to extrude new anodes. The customer receives their own material in the form of reworked anodes at a considerable cost savings. Republic will also inventory used lead anodes for up to twelve months in order to provide reworked anodes according to the customer's schedule. To take advantage of this opportunity please call us for information necessary to meet your requirements.
